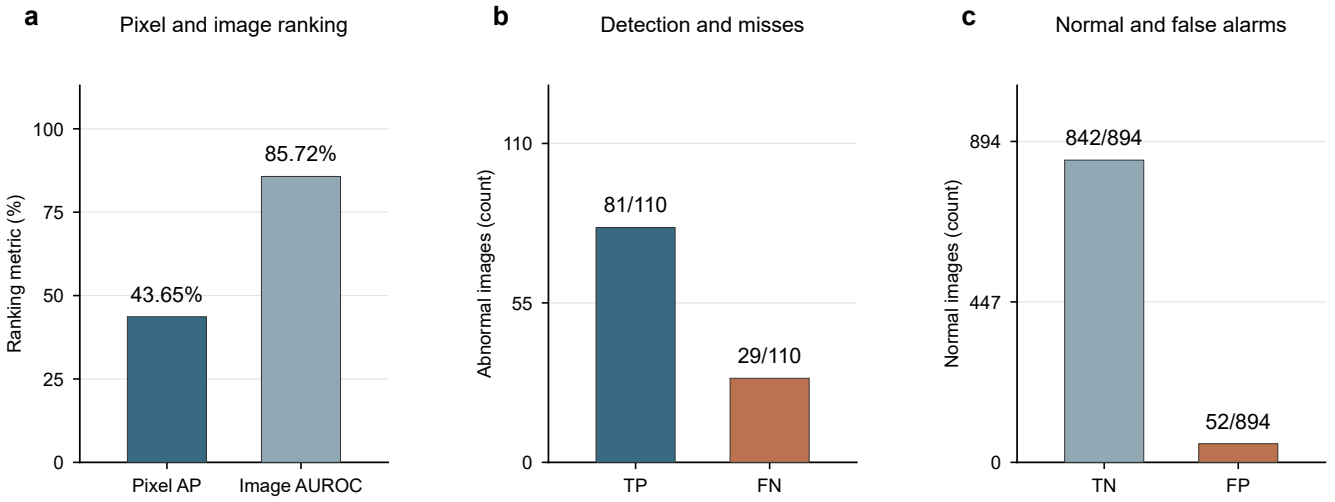
Strict R5 pretrained segmentation baseline

One final model | Same 1,004 E images: 110 abnormal / 894 normal



Abnormal recall: 73.64% (81/110) | Normal false-positive rate: 5.82% (52/894)

Pixel AP: 146,411,528 native pixels / 486,461 positive. Image AUROC: 1,004 maxima.

Decision: native max > τ = 7.264203168233501e-06; original Q200 threshold.

Single seed; fixed R5/split; historically seen E. Exploratory results, no confidence intervals.
